Dear respected brothers of Alpha Kappa Psi,

I am currently a freshman studying computer science and during my weekends, I enjoy going on long runs with my friends as there's truly no other feeling like a 5K first thing in the morning. When I first started however, I despised it, and never looked forward to a run. Yet, I kept at it, believing I could eventually conquer this mountain. This notion of persevering is one of the most valuable skills I picked up in regards to exploring interests. Predictably, I wasn't naturally gifted at programming either. Through hours of building captivating projects and navigating the capabilities of languages such as python and java, I finally realized I was ultimately captivated by the process of making errors and relearning diligently. Entering college with this in mind, I am constantly looking for new ways to better myself and develop skills, and this is where Alpha Kappa Psi stood out to me; a fraternity filled with members who have their own unique talents and abilities, a place where I truly believe I can grow professionally and collaborate with brothers in a meaningful way.

The skills I've developed directly correlate into how I can be a valuable member at Alpha Kappa Psi. I've worked as a Camp Counselor/Coordinator for two different organizations. I've acted as a positive role model for over **100** campers and cooperated with over **18** co-counselors to design engaging events for students. Through my time there, I've gained valuable insight in sustaining teamwork and the ability to navigate challenging situations and emergencies. I've also been an activity organizer for the Cranbrook Institute of Science, where I hosted just over **150** hours of science-based activities teaching around **700** students. Crafting these activities with others who had different perspectives than me highlighted the importance of collaboration, as we could constantly bounce ideas off each other until we agreed on ones that worked. This success as a team was again exemplified when I was a member on FRCs Robotics Team 226, as our team earned **2** regional awards out of over **30** competing teams. Through these endeavors, I am confident I have and will continue to align with Alpha Kappa Psi's core values such as brotherhood, knowledge, integrity, service, and finally unity.

Through programs like the Principled Business Leadership Institute and the Case Competition, I hope to elevate my business skills to the next level alongside brothers. It's been thrilling going through the interview process and I'm looking forward to working with you all and being a part of the Alpha Kappa Psi family.

Warm Regards,

Mohammed Yusuf Ahamed Tariq
