Dear Alpha Kappa Psi,

I am currently a freshman majoring in computer science. Outside of school, I love to work out. I also enjoy puzzles along with complex math, and hip-hop music. My hobbies align with my main expertise in the tech world as I enjoy programming to fix real-world issues. My interest in AKPsi comes from my goal to bridge the gap between technical skills and the business world. My recent experience as an Incoming Observer at the Warrior Consulting Group has shown me the importance of proficiency in both technical and communicational skills. Gaining knowledge on the operations of various businesses is an important skill, and being a part of AKPsi is the perfect opportunity for me to attain these skills.

Aligning with AKPsi's core values, I have demonstrated my sense of brotherhood by working in many team-based environments; such as the National Honor Society where I collaborated with over 100 peers to execute 30+ service events in which trust, reliability, and shared accountability were essential. As an international qualifier for both Business Professionals of America and Robotics, I depicted my sense of unity through teamwork and strong morale. I worked with teams of 20 to 30 people, uniting them from various technical expertise. This depicts what I wish to do at AKPsi: unite people from different technical backgrounds to foster unity.

I am committed to applying my technical skills with integrity to solve real-world challenges, as best reflected in my Currency Converter application. Providing live and accurate exchange rates and currency conversions, the application solved an issue my father was facing as he often transfers money internationally. Additionally, I developed a Terms and Conditions checker that marked the dangerous terms, prioritizing consumer safety whilst pushing businesses to promote transparency; ultimately aligning with AKPsi's agenda of developing principled business leaders. If I do become a part of AKPsi, I will stand for the ethical application of tech in business and advance our chapter.

Thank you for your time and consideration. The opportunity to be interviewed is a way for me to further present my ideas to blend computer science and service in order to better our chapter. I am excited to display my dedication to the AKPsi family and show my commitment to helping us grow.

Sincerely,

Shanmuk Javvaj
